Profile

I am a highly motivated Business and Finance graduate achieving a first class degree. Looking for a job specializing in programming. I chose Business & Finance to strengthen my knowledge of how the financial world operates. Programming has always been an interest of mine and I have been teaching it to myself in my spare time. The following courses have been completed to further a career in software development.

Udemy: Complete Python Bootcamp
freecodecamp.org: JavaScript Algorithms and Data Structures Certification
                    Responsive Web Design Certification

I have worked on personal projects including creating the games breakout, blackjack and space invaders from scratch to practice using an object orientated approach. I have also built several web pages to practice my HTML and CSS skills. I'm currently in the process of creating a portfolio site using the bootstrap framework, whilst working on my JavaScript skills. All of which can be found on my GitHub profile as well as select few on my portfolio website.
